

Questions for the March 27, 2008 ECC Panel

1. What are the greatest energy challenges of the next 20 years to which Cornell could potentially contribute a solution?
2. On which of these should the college focus?
3. What should the college's role be in solving these challenges?
4. What are the most promising sources of non-carbon based energy?
5. Are there other sources of carbon-based fuels that need to be explored?
6. Are there other key questions you would like to address or comments you would like to share?
