A detailed diagram illustrating the process flow for handling different tasks across various systems, including SOA Sync Position Data, Position Data, and other related activities. The tasks are color-coded and categorized by their status, completion times, and dependencies. The diagram also notes the involvement of different systems such as Workday, KFS, and others, with specific steps like installing ACL, checking recon GL, and purging reports. The diagram emphasizes the importance of timing, with some tasks requiring specific days or time slots, such as Tuesdays for certain operations. The text references specific systems and processes, including PDP, AP, SO, and SOA, indicating a complex interplay between different data management and synchronization activities.
