Increasingly Technical
Increasingly Functional
Unit Testing
•These tests verify that the system functions properly; for example, pressing a function key to complete an action.
Integration Testing
•The system runs tasks that involve more than one application or database to verify that it performed the tasks accurately.
System Testing
• These tests simulate the entire system and verify that it ran correctly.
User Acceptance Testing
• Real world testing conducted by staff, customers or vendors to verify the system meets their needs.
Targeted Automated Testing using Selenium
