*Title:

Finibus Bonorum et Malorum

*Author(s): (first names first; do not use et al.; separate with commas or 'and'; see linked help)

David Ruddy

*Abstract:

But I must explain to you how all this mistaken idea of denouncing pleasure and praising pain was born and I will give you a complete account of the system, and expound the actual teachings of the great explorer of the truth, the master-builder of human happiness. No one rejects, dislikes, or avoids pleasure itself, because it is pleasure, but because those who do not know how to pursue pleasure rationally encounter consequences that are extremely painful. Nor again is there anyone who loves or pursues or desires to obtain pain of itself, because it is pain, but because occasionally circumstances occur in which toil and pain can procure him some great pleasure. To take a trivial example, which of us ever undertakes laborious physical exercise, except to obtain some advantage from it? But who has any right to find fault with a man who chooses to enjoy a pleasure that has no annoying consequences, or one who avoids a pain that produces no resultant pleasure?

Comments: (e.g.: 10 pages, 5 figures, conference or other essential info)

Report number: (local report number, otherwise *leave blank*)

Journal reference: (full biblio info; *only* if already "published", otherwise *leave blank*)

Check your submission

- Review the abstract data displayed on this page. Edit metadata as necessary.
- View your article by clicking the button. (required)
- Add secondary categories and crosslists. (optional)
- When you are satisfied that your submission is ready, (and after viewing the article), click the "Submit Article" button below. (Depending on your browser settings, you may need to refresh the page to see the "Submit Article" button
- You may revise your submission until freeze time. Unsubmitted articles are retained for two weeks.
- MathJax will render inline ($-enclosed) T_EX in the title and abstract fields (e.g. $P(E) = {n \choose k} p^k (1-p)^{ n-k}$ becomes $P(E) = \binom{n}{k} p^k (1-p)^{n-k}$). Errors or unknown macros are displayed in red. Disable MathJax.
