Physics Setup

Next, we will apply the boundary conditions to the geometry.

Summary of steps in above video:

- Change the material of the wing to a new material with the name Aluminum 6061-T6
- Add a density property of 2700 kg/m^3
- Add an Isotropic Elasticity property, with Young's Modulus = 1e7 psi and Poisson's ratio = 0.33
- Add a fixed support on two edges of the wing's end
