

Challenges for Future Semesters

Challenges for Future Semesters

Each subteam needs a document describing challenges and goals for future members of their team. This section should also mention recommended training needed at the beginning of the next semester, and/or link to a page in the team's wiki space that outlines beginning of semester training. Please also list any special skills or requirements for future team members, like prerequisites of CEE 4540, AutoCAD, etc. Other important information to include is how many people you think the team needs and the name of a potential subteam leader (if known).

This list is used by new members the next semester to decide which team to join. It is also used as a guide to set tasks and goals.

The Challenges for Future Semesters should be created in the [challenges](#) section of the wiki.
