

## Wenny's Individual Contribution Page

### Spring 2009 Contributions

Earlier in the semester, I met with both the Aeration and Sand Filter sub-subteams to do experiments using the two different setups. I worked with Tiffany and Tanya on trying to collect data with the Aeration System, and I did an experiment with Haley and Ling and studied data collected from the Sand Filter System.

When the entire subteam merged back into just the Sand Filter Team, I met regularly with the other team members to set up experiments and build the re-designed Sand Filter System. Other tasks that I performed involved going into the lab to change sand grains when we were ready to run a new experiment, measuring the actual flow rate of water leaving the system, performing sugar tests, and looking at the data produced from the experiments.

Outside of the lab, I worked on literature searches and created the [Annotated Bibliography](#) page, writing summaries for the articles that I found and writing the bibliographic citations. Additionally, I helped edit and maintain the Floating Floc wiki page and worked with the other team members on the midterm and final wiki reports.
