## Haley's Individual Contribution Page

### Spring 2009 Contributions

This semester, I am working on the Floating Floc team. Since we halted research on the aeration method, [Tiffany](#), [Tanya](#), [Wenny](#), [Ling](#) and I have all been working together to research the [backwash sand filter method](#) for removing dissolved oxygen from water. The semester has consisted mostly of finalizing the experimental setup, and I spent a lot of time in the lab trying to make it work. I've been acting as substitute team-leader for Tiffany while she was unavailable.

I have created many of the various diagrams for the website, including all of the experimental setups ([initial setup](#), [second setup](#), [current setup](#)) and the illustration of our [idea](#). I have also kept our experimental procedures on the [wiki page](#) up to date as we changed them. Ling and I both contributed to the pages of our initial experiments ([initial experiment](#), [first bubble collector experiment](#)).

I have also contributed to our subteam's [semester goals](#) and [meeting minutes](#).

Currently, we are working with the third phase of our experimental setup, and we are working to collect reliable data from which we can draw useful conclusions.
