Exceed

Backspace

Under Xconfig, Input, Edit.
Double click on the BS button. This should open a window called
Key:Backspace (scan code 0xe).
Change Symbol Set to Filler.
Click on NoSymbol and drag it to the shifted option (Delete). So instead of
saying Delete it will now be NoSymbol.
Click on Okay
Restart the Exceed Xserver.

File too large "mgc.fdb"

 If, upon starting exceed, you receive an error message about a file, "mgc.fdb", being too large, just delete that file.

You may wish to leave the error message box open so that you can follow the Windows directory structure path down to the mgc.fdb file. However, you will not be able to actually delete the mgc.fdb file until you click "OK" in the error box.
