NICOLAS PAUTASSI's Individual Contribution Page

FALL 2009 Contributions

In the AguaClara project I work together with Gonzalo Caprario. We are part of the design team, but are not involved with MathCAD coding for the Design Tool. Being both from South America and having work experience before, our task within the AguaClara team is to be a link between Engineers in Honduras, APP (Agua para el Pueblo), AguaClara team in Honduras and AguaClara team in Cornell. During the semester I have been involved in the modifications of the sedimentation tank for the new AguaClara Plant at Agalteca, Honduras (brainstorming ideas, checking calculations and working on the final design drawing). I was also involved in the Santa Rosa de Copan plant design, which is the new AguaClara project for 2010.
