Fall 2009 Contributions

I am in the Tube floc team.

Fall 2009 Mid-Semester Contributions

This semester, I have started to work on the Tube floc research team. I'm a part of the data analysis group so I worked with my teammates to analyze the data from the experiments we have done so far. I especially worked on analyzing our first experiment. I am also the leader of the group so I work with the experiment group to do the link between data analysis and experiments. I have also started research on pH control in preparation for our next experiment. As team leader I took care of the organization of the wiki and the distribution of the work.

Fall 2009 Second part of Semester Contributions

This second part of semester, I worked a lot on analyzing the data coming from our experiments. I modified our data processor (MathCad file) so we could plot residual turbidity and calculate the mean turbidity. I summarize our analysis in the wiki. I tried to keep the team organized by creating files where people could write information about experiments and what they analyzed.
