## Andrew Hirshfield's Individual Contribution Page

### Spring 2010 Contributions- Design Team

I have been working with Andrew Sargent on the inlet and exit channel tanks. I helped with the code to add a connecting pipe from the exit tank pipe to the inlet tank pipe for waste water. I have also been working on code for a chimney stop to plug the inlet tank pipe when it is not being used. This code has not yet been added to the SedTank with pieces file. I plan on working with Andrew to finish this code. Our other goals are to fix the tee on the inlet tank pipe and design a drainage channel. I have made some additions to the Inlet and Exit Weir Tanks Wiki page ([Inlet and Exit Weir Tank Wiki Page](#))
