Muhammed's Individual Contribution Page

Fall 2011 Contributions - Demo Plant

To date, I have researched the AguaClara water sanitation process and have become versed in the terminology used by those involved. I have also completed the preliminary quiz on ***How Water Flows Through the Plant***.

This term I was able to create CAD drawings of the demonstration plant along with the newly added components(LFOM, Doser, Sedimentation Tank, and Rapid Sand Filter. This page will be updated soon to show the CAD drawings with descriptors of the way that water runs through the demo plant.
