

Done - defined

Definition of Done

- **What does 'Done' mean to us for each end to end integration?**
 - all in all: ingest data, run the business process needing it, and validate the data
 - monitoring
 - documentation
 - exception processing, handling
 - systems downstream still function - example those directly fed from PS now still work
 - secure
 - after stabilization, done for stable state
 - once support is in process
 - done for cutover
 - example Kronos: **** all data in, all data out**** scenarios (example, one job, one union for certain time period gets paid) have been tested - as in
