

Workday constraints to know about

file sizes, turn around time on tests, etc.

Workday constraints to know about:

- normal sandbox: gets updated every week from production
- update sandbox -> you get one update on a prescribed day
- turn around time on tests that update sandbox is one week (data is refreshed at that rate, so tests that update data that has to be reset for the next test will have to wait a week).
- additional tenants will require a charge. (actual charge is not yet known)
- there is a 6 week window for implementing a new release
- 2GB limit on files on output** DW extracts have to be deltas
- 5MB limit on files on input
