

Assumptions - general

Assumptions that apply broadly.

assumptions:

- don't plan on workday specific testing environments for PS, Kronos, KFS ...for dealing with each workday release. Rather, use existing test environments as much as possible and coordinate their use
- integrations generally don't have to be retested thoroughly for each release.
- need a test environment on CU side to check throughput and fault tolerance/reporting.

NOTE: Workday reps are checking on how Workday ->thrid party testing happens with each release. (a trust it will work model, or one filled with regression tests and matching environments, etc.)
