## **Diana Kelterborn's Individual Contribution Page**

### **Spring 2014**

This semester I will be working on the Village Source to Environment team. One of our goals is to design a distribution system for a village in India. I helped to compile the work of six different CEE 4540 teams last fall who each came up with a design. I have also written Mathcad code to calculate the amount of power available from solar panels in a given location. As the semester continues I will help to integrate this into the main code.
