

Static Web Hosting 2012 Changes

On April 28th 2012 the Static Web Hosting service will be migrated to new hardware. There should be no visible change to the service and it should not be necessary to update any existing client configurations. Customer data will be migrated to the new hardware and there should be no action required for most users.

We will start enforcing file quotas with the move to the system. Disk quota has been set based on data from April 11th, 2012. Additional disk quota will be granted on a case-by-case basis. You can check on your current disk utilization by visiting:

- <https://static.hosting.cornell.edu:8009/status>

We will also be deactivating sites that no longer appear to be active or were setup for staging purposes. The complete list of deleted sites can be seen below. Deactivated sites will have a sorry page displayed that will look like the following: <http://static.hosting.cornell.edu/infra-error/retired.shtml>

Summary of changes

- Services moved to pair of Linux VMs
- New default configuration that allows one the ability to modify directoryindex, rewrite rules, errordocument, serverside includes(SSI), directory listing, from ".htaccess"
- New support for SSL static sites
- New support for SSL sites that utilize CU WebAuth
- Several vhosts will be disabled (i.e. test.*)

Sites to be deleted (in many cases these are only aliases for an existing production website that will not be deleted):
