Kira Gidron's Individual Contribution Page

Fall 2012 Contributions

This semester I worked on the materials list for the AguaClara Design team. I began this semester by designing the overall structure of the materials list including its purpose, features and parts. I also outlined in the Final Design Report what the general steps are to create a useful materials list. I then worked on the lances calculation: building the pipe length matrix and the code for calculating the number of needed lances.
