Connection instructions

ChemIT's "short" instructions on connecting to CIT's static web site service.

For more info, see

- CIT static web site service tips
- Connections Instructions - people who are two-factor expanded

---

CAUTION: Most people are required to use Duo at Cornell. If that's true for you, see instead:

- Connections Instructions - people who are two-factor expanded

If you aren't required to use Duo (some grads, faculty, etc.):

One way to connect to the CIT server is using the WebDav protocol, via <https://static-webdav.kproxy.cornell.edu/ccb-groupname/>. All logins are controlled by NetID and NetID password.

* In Windows – use Map a Network Drive

* In Mac – Use connect to server under Go

Connecting will mount your webspace as a filesystem, therefore enabling copying of the files. Move the appropriate files up to the server.

You can then, of course, verify the server is properly servicing your web files by going to <http://groupname.chem.cornell.edu>.
