

Off-site hosting examples

Examples of non-campus-based web and web-related services, such as domain hosting.

Please notify ChemIT of any changes to your web hosting

ChemIT will ensure that your Cornell domain name <pi_name.chem.cornell.edu> is set up correctly to wherever you are hosting your pages, if possible.

Web hosting

GigHub Pages

Marohn's web sites

<http://marohn.chem.cornell.edu/> => <http://johnmarohn.github.io/> (request fulfilled 7/9/15)

- Migrated from CU Blogs July 2015, in response to CIT charging for CU Blogs and theme expiring (wpmu-triden) so had to do something anyway.

Their how-to regarding what group must do go "receive" (Cornell's) cname at this site:

- <https://help.github.com/articles/adding-a-cname-file-to-your-repository/>

Info about this service:

- <https://pages.github.com/>
- <https://help.github.com/articles/what-are-github-pages/>

Their "Pages" service is free for public pages, which is usually sufficient.

Here's info if you are interested in their plans, which extend beyond web hosting (their "Pages" offering):

Moonfruit

Aye's web site

UPDATE, January 2016

- Aye group moved off of this web hosting service to CU Blogs.
- Aye group moved off of the associated DNS service, and their new [registrar/ DNS service provider is now hover.com](#) .

Old info

This service's web site required Flash; won't work within iOS.

<http://ayelab.org/> => <http://yimonaye.moonfruit.com/>

- Note that this web host serves Flash pages so not really usable via iOS (such as an iPad).

History with attempt to migrate Aye's web site:

- Tried migrating from [off-site hosting \(http://ayelab.org/ => http://yimonaye.moonfruit.com/\)](http://ayelab.org/) to CU Blogs
- 8/22/13: Decided not to move it to CU Blogs. CU Blogs had not meet her needs for the level of investment she was able to afford to migrate in 2012.
 - Couldn't make it identical, easily, even with CIT's help.
