# Brooke Pian's Individual Contribution Page

### **Summer 2011 Contributions**

This summer, I am part of the Demo Plant team. Our challenge is to incorporate the stacked rapid sand filter design of the AguaClara plants into the demonstration plant.

### **Spring 2013 Contributions**

This semester, Bonnie and I continued Tori's work on high flow modifications for AguaClara plants. We considered the constraints on achieving macro-and micro-mixing in the rapid mix channel for high flow plants. I helped write code to determine the geometry of the rapid mix channel. We then calculated the headloss through the channel, as well as the dimensions for a micro-mix orifice sheet and micro-mix gates (of PVC pipes, steel or aluminum bars).

#### **Summer 2013 Contributions**

This summer, I am part of the Turbelent Flow Flocculator team.
