

Summer Program

AguaClara Summer Program 2016

Each summer AguaClara provides an internship style program located on Cornell's Ithaca campus where students can get practical experience with research, engineering design and creativity. During the 8 week summer session, students commit 40 hrs/week to ongoing research projects (check out our [current projects](#) for examples of what we're already engaged in). For the summer of 2016, this program is from June 13 - August 9. Interviews to be accepted into AguaClara Summer Program will be conducted Wednesday, 3/16 through Sunday, 3/20. You will need to [sign up for an interview slot](#) and fill out the [pre-interview form](#) at least a day prior to the day in which you hope to interview. Students will be informed of the acceptance decision by Friday, 3/25.

Updated interview information:

1. The interviews will be held in the main AguaClara lab - Hollister B60. This is in the basement of Hollister Hall. If you are in the Hollister main lobby, walk downstairs, turn 180 degrees, walk back by the bathrooms, take a left and walk by the machine shop on your right, and walk through the card access doors that will be propped open for you (unless the previous interview is still going on). Once you go through the card access doors, the room in which we will conduct interviews is on the left - the door requires a code, but just knock and we'll let you in.
2. Please be sure to fill out the [pre-interview form](#) at least one day before your interview.
3. Please be prompt.
4. There is no need to wear formal/business attire.
5. Please bring with you the most recent version of your resume or CV.
