

# Bioengineering

The Bioengineering Minor is administered by the Department of Biomedical Engineering.

Students intending to complete the minor must file a course plan with the Biomedical Engineering office in 115 Weill Hall. The minor requires three approved courses, either two in bioengineering and one in biological sciences, or three in bioengineering. Students must also take the Bioengineering Seminar for one semester. Also, students selecting this option must select a bioengineering-related M. Eng. project.
