

Wake-on-LAN

Remotely start a computer using its (properly configured) network card, if routing permits. Easiest within a LAN, at Cornell. <https://itunes.apple.com/app/depicus-wake-on-lan/id399848364?mt=8>

- Software creator also has non-Apple-focuses solutions: <http://www.depicus.com/wake-on-lan/>

Lower-powered RaspberryPi-based WOL Forwarder
