Fall 2013 Contributions

I am a member of sedimentation tank design details team this semester. Our goal is to update the sedimentation tank code. These changes include implementing new designs based on recent researches and ridding the tank of unneeded pieces. Specifically, we have successfully shifted the inlet jet and manifold to their proper placement, and now we are working on adding feet to the manifold which has been shifted over. The challenging part is that we need to figure out how to calculate the lengths of long and short feet.
