

Coldfusion Application

Summary

The following profile is suitable for an application that has been migrated from the CF9 Hosting environment

Details

Recommended Software

Name	Version
Coldfusion	10

Optional Software

Name	Version	Description
Git	1.8.x	distributed version control
Mercurial	2.7.x	distributed version control
PHP	5.4	can be useful on dev instance for PHP Shell

Suggested Frameworks

Name	Description
CFWheels	Provides MVC patterns

VMs / Instances / Vhosts

2 VMs are recommended (Coldfusion consumes a large amount of resources). The instances can use the "Shared Apache" unless there is need for custom virtualhost includes.

Name	Purpose	Instance	Vanity URL	Comments
webhostXX	Production	[appname]	[appname].[subdomain].cornell.edu	Secure Profile / CFML caching enabled
webhostYY	Test/QA	[appname]	[appname]test.[subdomain].cornell.edu	Secure Profile / CFML caching enabled
webhostYY	DEV	[appname]	[appname]dev.[subdomain].cornell.edu	Secure profile disabled / CFML caching disabled
