

Drupal Capistrano - .gitignore

Use this file to tell git to ignore some files we don't want in source code control:

```
# .gitignore
# Ignore configuration files that may contain sensitive information.
public/sites/**/*.settings.php
!public/sites/*/default.settings.php

# Ignore paths that contain generated content.
backup/
cache/
!**/ctools/**/*.cache/
public/sites/default/files
public/sites/default/tmp
private_files

# Ignore .htaccess files since servers want them to be empty
public/.htaccess
```
