  kitty -> ~/development/my_cute_cat/public/
```

The Staging or Production Server

Server Directory

* *Note: We currently don't have the servers set up to follow Capistrano's 'current' symlink. To work things out I've added a 'cap' directory:
/libweb/sites/<domain name>/cap
and deployed the sites there. If you add a symlink like this
/libweb/sites/<domain name>/htdocs/capcurrent -> ../cap/current/public
you can see the deployed site at
http://<domain name>/capcurrent
BUT it only works if you turn off Clean URLS
http://<domain name>/capcurrent/?q=admin/config/search/clean-urls

Here is a JIRA issue about setting up new development and deploy servers.

What we've got now:

```
/libweb/sites/featureserver.test.library.cornell.edu/cap
.
