Video on demand services, campus-based

Easy-to-use Kultura-based services, often better than using YouTube for Cornell and course-related videos.

ChemIT knows of the following three video-on-demand campus services.

- They all use Kultura (open source software), which we have found easy for users to use.

1) A good choice () for staff doing Cornell-related work:

- https://www.it.cornell.edu/services/vod/
- https://vod.video.cornell.edu/

It's a quick and easy self-service to get started, but NOT for course-related work, apparently (see #3, below).

2) One for staff or departments who have more substantial needs (such as more videos, larger videos, longer retention needs than the above service):

- https://www.it.cornell.edu/services/vps/

This service is gated by staff, so it is not self-service to get started.

3) The one for any course-related work, in BlackBoard:

- https://www.it.cornell.edu/services/courseav/
- http://bbhelp.cit.cornell.edu/working-with-video/
