User Defined Functions - Exercises

Authors: Lara Backer and Rajesh Bhaskaran, Cornell University

Problem Specification 1. Pre-Analysis & Start-Up 2. Geometry 3. Mesh 4. Physics Setup 5. Numerical Solution 6. Numerical Results 7. Verification & Validation Exercises Comments

Exercises

The user defined function downloaded in the first section is only applicable to cylindrical boundaries due to the definition of the lift function as a function of theta. Alter the UDF to be applicable to any surface geometry, such as an airfoil. You can call the modified function *liftFunc2*. Verify that *liftFunc2* gives the same result as the original *liftFunc* for the cylinder.
