Larissa Sakiyama's Individual Contribution's

Spring 2015 Contributions

I have joined the Ram Pump team. Our goal is to optimize and modify the current ram pump for implementation in a water treatment plant in Honduras.

Fall 2014 Contributions

I was part of the Water Treatment Selection Guide team. The sub-team goal is to create an expert, interactive technology selection tool that empowers water supply professions to make better decisions. During the semester I focused on developing the plant cost calculator, which provides an estimate of the total cost for an AguaClara plant.
