

# OS X Support Statement

## OverView

CNF will generally support the two most current releases of Mac OS X. This correlates with Apple's unofficial OS X support policy.

Note that when Apple releases a new version of OS X, it may take some time for CNF to qualify the various applications on the new operating system version.

Notes from previous versions (un-confirmed if still exists on 10.14+):

- Office2016 cannot save directly into AFS space. Save someplace else and then copy over the file.
- Some AFS files may not be openable if Finder Preview mode is turned on. Turn off Finder preview and use xattr to delete com.apple.quarantine from the file.

## macOS Catalina (10.15) - recommended version of OS X

- ***CNF Computing does not recommend Big Sur (11) at this time.***
