

White Paper

White Paper

The purpose of the White Paper team is to produce technical communication materials for AguaClara. We will be constructing a series of presentable leaflets that explain the technology, the structure, and the goals of the AguaClara organization. This literature will be used to inform interested investors as well as competitors. They will explain the depth and breadth of the AguaClara technology.

Spring 2015 Contributions

This semester we are focusing on producing technical materials for each of the unit processes in the AguaClara design. We hope to describe each unit process with respect to the rest of the plant, as well as explain how the AguaClara approach is novel. We hope to use images captured during the construction of the water treatment plants, as well as images of each unit process in use. In order to describe the theoretical aspects, we will include simple schematics. This will all be done with a similar vision as the website, keeping the a consistent visual trend.
