## Andres Larraza's Individual Contribution Page

Subteam: Fabrication Team

### Spring 2015 Contributions

This semester I am working in the Fabrication Team. During this semester, I will be working on creating a Decomposed Organic Matter(DOM) sensor for the plants. This sensor will be more affordable than the current marketed equivalent. By the end of the semester I hope to have a working prototype that has an accurate measurement of DOM. I will be focusing on the development of the circuitry and the overall system well as the accuracy and the ability for the apparatus to sense DOM.
