Fall 2015 Contributions

This semester, I am part of the Foam Cleaning subteam. Our goal this semester is to design an apparatus to test methods of most effective way to clean the foam filters.

Spring 2015 Contributions

The Small Scale Plant Model subteam this semester's goal is to simplify and size down the current model. We want the model to be easier for others to understand how water flows through the system. I worked primarily with Edbert to simplify the model while fixing the previous small scaled plant model. I also worked on testing new ways to mesh pipes in AutoCAD to make it easier to be 3D printed.
