Cornell's private network (10-space)

When a service moves from campus to the cloud, the service becomes unavailable to devices on 10-space UNLESS the servers of the service in the cloud is added to CU's transproxy.

ChemIT's summary table

Service	On CU's transproxy?	Notes
CommonSpot, in the cloud	(Oliver doesn't know)	8/3/15-Monday: Migration to cloud expected this week, for A&S's web server and the relevant departmental web sites.
Confluence	Yes (except <wiki>)	8/3/15: Forthcoming "in the short term", per communications to Oliver. 8/4/15: Confirmed that <confluence.cornell.edu> worked. However, <wiki.cornell.edu> is still not listed at proxy page (nor is it working there, 'natch).
Kronos	Yes	7/31/2015-Friday: Kronos moved to the cloud (AT&T), with no transproxy adjustments. We requested it (along with others?) on Friday, and it was enabled Monday, 8/3/15.
Workday	Yes	
Longview	Yes	
Student Center (PeopleSoft)	No	
CU Blogs	No
