Spring 2016 Contributions

I work on the Rapid Mix Contact Chamber (RMCC) this semester. Our team are going to find out how a contact chamber before the flocculator affects the rapid mix efficiency and coagulant losses.

Fall 2015 Contributions

I work on the team Foam Filter Cleaning this semester. I have designed an apparatus including both loading phase and backwash phase for experiment on the foam cleaning. I also run several experiments to find out that when the filtration velocity grows bigger, the backwash efficiency becomes bigger.
