

Regional Planning

Regional Planning

The Regional Planning team is new, and expects this semester to be spent largely in research and data collection. We are going to compile as much information on India as we can, using methodology suggested by Professor Monroe as well as papers written by Karim Beers and Kenichi Victor Nishikawa Chavez. We have made good headway into finding physical data, such as rainfall, population sizes, and areas with lower percentage access to clean drinking water. We are going to continue gathering data and correlating our findings.

Spring 2016
