Personal Goals/Contributions

Fall 2017

My goal this semester is to work with the Investments Team to create an list of potential investors that the team can reach out to by the end of the spring semester. Another goal is to contribute to the accounting tool which will help plants in Honduras keep track of their finances.

Spring 2017

My goal this semester is to gain a better understanding of what the Design team's goals are. I will also work to understand Fusion 360, a new software that the design team will be using.

Spring 2016

My goal this semester is to help design and build a Rapid Mix contact chamber to add to the current Rapid Mix tube in order to increase the efficiency of the plant. I hope to work with my team members to vary the residence time of influent water and to vary the shape and geometry of the Rapid Mix chamber in order to determine which design results in the least coagulant loss to the walls.
