

Webex of Columbia Metadata Working Group Meeting - Columbia PARC

**Amber Billey
Simone Sacchi**

Friday, January 29, 2016 - Olin 106G

Columbia's Promoting Access to Research and Collaboration (PARC) is a CUL/IS program to enable new forms of interdisciplinary research, promote awareness of University research and increase collaboration within and across disciplines. ColumbiaPARC achieves these goals by providing a single system to aggregate and manage information about the research and scholarship communities, environments, and results at Columbia University, and to facilitate interconnections, cross-communication, and report creation across multiple internal stakeholders within the University ecosystem. ColumbiaPARC supports the University mission by helping the institution to "convey the products of its efforts to the world."
