Start adding the content

- [Guidelines](#) for creating video snippets using Camtasia
- It is helpful to have a summary of all of your data separated into an outline of the tutorial. For example, refer to Dr. Bhaskaran's outline for the ANSYS problem
- After the videos are created, make sure to add a text summary of the videos. You can check how to do that in [Step 1: Introduction to Editing in Confluence](#).

How to link to a specific spot on a page?

Linking within a page is pretty easy. You first add an *Anchor* where you want the link to go to, and then you create the link to that place somewhere.

1) Creating the Anchor

- a) Go to location where you want the link to go to
- b) Click on +Insert > Other Macros > Anchor
- c) Give it a name. It can contain spaces. Readers will **not** see this anchor! (Example: Boundary Conditions)

2) Creating the Link

- a) Click on Link, then go to Advanced
- b1) If the anchor is on the **same page** as the link, you can simply add #Anchor Name on the Link text box (for instance *#Boundary Conditions*). Write the text to display on the link on the next text box. (say, "Jump to Boundary Conditions")
- b2) If the anchor is on **another page** within SimCafe, you then should add Page name#Anchor Name on the Link text box (in our example: *Physics Setup#Boundary Conditions*)
