

Space Systems Design Studio

The Space Systems Design Studio performs fundamental research in spacecraft architecture. We are currently engaged in several flight projects to demonstrate concepts, provide on-orbit research testbeds, and enhance Cornell University's burgeoning spaceflight reputation. Team members at all levels, including faculty, Ph.D. students, and undergraduates, are involved with our spaceflight activities. We will be having an application round the first week of school along with detailed information for the projects looking to recruit new members.
