arXiv is hiring!

Cornell University Library's Information Technology group seeks an experienced senior software engineer to serve as Lead System Architect for the next generation system of arXiv.org - the premier open access platform serving scientists in physics, math, computer science, and other disciplines. As a member of the arXiv "next generation" team (arXiv-NG), the lead system architect will design and develop a new integrated, modular system that will continue to provide the scientific community with access to the latest research results. For 25 years, arXiv.org has enabled scientists to share papers within scientific communities and to publish "pre-prints" that are scientific papers shared prior to a paper being published in a journal. Around the world, arXiv.org is recognized as an essential resource for the scientists that it serves. The new arXiv-NG system architect will play a key role in developing a modernized, next generation system to continue this legacy.
