Standard AWS Technical Solutions

- Standard Solutions That Need to be (Better) Documented
- Standard Solutions
 - Elastic Beanstalk
 - Detailed control of Elastic Beanstalk environment configuration via .ebextensions
 - Set an environment variable with AWS region for instances in Elastic Beanstalk
 - Use an EFS volume for instances in Elastic Beanstalk
 - Setup Papertrail on Elastic Beanstalk instances
 - Elastic Compute Cloud (EC2)
 - Expanded Notifications for EC2 Instance Retirement
 - Joining EC2 Instances to Cornell AD
 - Elastic Block Store (EBS)
 - Snapshot EBS volumes attached to running EC2 instances
 - Prune EBS snapshots
 - o Route53
 - Tie a cornell.edu hostname to an AWS service
 - O Identity and Access Management (IAM)
 - Using IAM policy to restrict EC2 actions to specific users or role
 - Allow a role from one AWS account assume a role in a different AWS account
 - Use Cornell Two-Step Login (Shibboleth + Duo) to get AWS CLI credentials
 - Relational Database Service (RDS)

This page provides an index to existing documentation and a To Do list for standard solutions of technical problems we regularly face.

Standard Solutions That Need to be (Better) Documented

(Also, standards solutions that we need to come up with.)

• Provide customer access to files on EFS volumes, without requiring shell access. Access to AWS EFS Volumes

Standard Solutions

Elastic Beanstalk

Detailed control of Elastic Beanstalk environment configuration via .ebextensions

- Lots of various configuration suggestions.
- https://github.com/awslabs/elastic-beanstalk-docs/tree/master/.ebextensions/aws_provided

Set an environment variable with AWS region for instances in Elastic Beanstalk

- There are lots of ways to do this, but this is automagical if you are using Elastic Beanstalk
- https://github.com/awslabs/elastic-beanstalk-docs/blob/master/.ebextensions/aws_provided/instance%20configuration/env-regionname.config

Use an EFS volume for instances in Elastic Beanstalk

- http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/services-efs.html
- Create EFS https://github.com/awslabs/elastic-beanstalk-docs/blob/master/.ebextensions/aws_provided/instance%20configuration/storage-efs-createfilesystem.config
- Mount EFS https://github.com/awslabs/elastic-beanstalk-docs/blob/master/.ebextensions/aws_provided/instance%20configuration/storage-efs-mountfilesystem.config

Setup Papertrail on Elastic Beanstalk instances

- http://help.papertrailapp.com/kb/hosting-services/aws-elastic-beanstalk/
- https://github.com/papertrail/remote_syslog2/blob/master/examples/remote_syslog.ebextensions.config
- See also Papertrail Logging SaaS

Elastic Compute Cloud (EC2)

Expanded Notifications for EC2 Instance Retirement

AWS Instance Retirement CloudWatch Event

Joining EC2 Instances to Cornell AD

How to join an AWS Windows instance to Cornell AD

Elastic Block Store (EBS)

Snapshot EBS volumes attached to running EC2 instances

- Use snapshotting instead of a traditional file backup process.
- Locally developed solution

 - Configure a Jenkins job to run the auto-snapshot utility.
 https://github.com/CU-CloudCollab/cucloud_utils#auto-snapshot
- Another open source solution
 - https://blog.rackspace.com/automate-ebs-snapshots-with-snapper
 - https://github.com/rackerlabs/ebs_snapper

Prune EBS snapshots

- Prune snapshots that are older than a specified age. Useful in conjunction with "Snapshot (backup) EBS volumes attached to running EC2 instances".
- https://github.com/CU-CloudCollab/cucloud_utils#clean-snapshots
- https://github.com/CU-CloudCollab/cucloud_utils/blob/master/bin/delete-ebs-snapshots-older-than.rb

Route53

Tie a cornell.edu hostname to an AWS service

- See How to Setup AWS Route53 to Work with Cornell-Managed DNS blog post.
- Scheme to Route Traffic to On-Premises and AWS Endpoints

Identity and Access Management (IAM)

Using IAM policy to restrict EC2 actions to specific users or role

Restricting EC2 Actions using Custom IAM Policy

Allow a role from one AWS account assume a role in a different AWS account

https://github.com/CU-CommunityApps/aws-examples/tree/master/cloudformation/iam/assume-role-example

Use Cornell Two-Step Login (Shibboleth + Duo) to get AWS CLI credentials

· Access Keys for AWS CLI Using Cornell Two-Step Login - Shibboleth

Relational Database Service (RDS)

- . MyISAM Tables in MySQL RDS Instances Before migrating a MySQL database to AWS Relational Database Service, be sure to understand the impact of that move if any tables in your MySQL database utilize the MyISAM engine.
- · Encrypting AWS RDS Instances You can encrypt your Amazon RDS instances and snapshots at rest by enabling the encryption option for your Amazon RDS DB instance.
