Karan's Individual Contribution Page

Spring 2017 Contributions and goals

As a new member of AguaClara and a part of the CDC subteam, I designed and fabricated a new and improved modular calibration columns (MCC) system. I created two systems, one to be sent to Honduras, and one to be used in the lab by future teams for testing. I also worked together with the 1L/s testing sub-team to create an MCC system for the 1L/s plant.
