Spring 2017 Semester Prospective Contributions

This semester I am a part of the Rapid Mix Contact Chamber Sub Team. This is my first semester actually on Agua Clara, but it isn't my first interaction with the project team itself. In the Fall 2016 semester I took CEE 4540, which goes through Agua Clara's processes while teaching about municipal drinking water treatment. Having taken CEE 4540 and having a fairly good grasp on the material taught in the course, I hope to be able to work closely with my fellow subteam members and successfully take on and answer all the big questions we have regarding the Rapid Mix Contact Chamber.
