

Metadata Working Group Code Club

Scope

This is an informal, small group of people meeting to work through common (or uncommon) metadata workflows using the scripting tools brought up in the Metadata Working Group Bootcamp and Workshops - namely, shell & bash, git, SQL, python, catmandu, openrefine, etc. The goal of each session is for the participants to work through solving a proposed metadata problem using these technologies in "real time". These sessions are especially open to everyone, and in order to support an open learning environment, we'll ask all participants to please abide by the "Hacker School Rules" (aka the [Recurse Center Social Rules](#)).

Schedule

[illegible]
