2. Geometry
3. Mesh
4. Physics Setup
5. Solution/Results
6. Verification & Validation

Pre-Analysis & Start Up

Simplified Governing Equations

In the paper "Instability of Taylor-Couette Flow between Concentric Rotating Cylinder" by Hua-Shu Dou, Boo Cheong Khoo, and Khoon Seng Yeo the equation for the critical condition of primary instability is simplified for a concentric rotating cylinder. It is given and solved in the equations below. In order

to incite Taylor-Couette flow, K_{max} must be between 370-389 so a value of 380 was chosen as K_{max} for the calculation.

$$K_{max} = \frac{\omega_1 R_1 (R_2 - R_1)}{v} = 380$$

$$v = \frac{\mu}{\rho} = 8.93 * 10^{-7}$$

$$R_1 = 0.5[m]$$

$$R_2 = 1[m]$$

$$\omega_1 = \frac{K_{max} v}{R_1 (R_2 - R_1)} = 0.00135736 [rad/s]$$

Start-Up

A few words on the formatting in the following instructions:

1. Notes that require you to perform an action are colored in blue
2. General information is colored in black, but does not require any action
3. Words that are **bolded** are labels for items found in ANSYS AIM
4. Most important notes are colored in red

We are ready begin simulating in ANSYS AIM. Open ANSYS AIM by going to **Start > All Apps > ANSYS 18.1 > ANSYS AIM 18.1**. Once you are at the starting page of AIM, **select the Fluid Flow** template as shown below.

You will be prompted by the **Fluid Flow** template to either **Define new geometry**, **Import geometry file**, or **Connect to active CAD session**. **Select Define new geometry** and press **Next**. Finally, check the **Swirling flow** box in the **Additional flow physics** and press **Finish**.

Go to Step 2: Geometry

Go to all ANSYS AIM Learning Modules
