Typography (Mule)

Fonts

The Cornell AAD digital ecosystem two font families hosted by Typekit. These fonts can also be purchased for desktop use in print pieces for a consistent look and feel between media.

Freight Sans Pro

Freight Sans is a clean, friendly sans-serif font that is used in the base type styles in the design system. The design system uses Freight Sans in four styles and two weights: - Medium Regular - Medium Italic - Semibold - Semibold italic

More Pro

More is a legible, contemporary-feeling serif font that is used for headlines, sub-heads, and large call-out text. The design system uses More in two styles: - More Wide Book - More Wide Book Italic

Formatting type

The type styles in the design system have been predefined for a consistent, usable experience across pages. For that reason, it is best not to override type styles such as font family, size or color. Inline styles not only throw off the system, they can also break layouts if the global styles of the site change later.

Instead, whether you are using Wordpress's visual content editors or HTML tags, it is best to define type by its semantic purpose--headlines, bold, italic, links--and let the system style it on the front end.

If you are expanding the site and need to add new styles, Typekit's documentation includes how to reference Typekit fonts in CSS.
